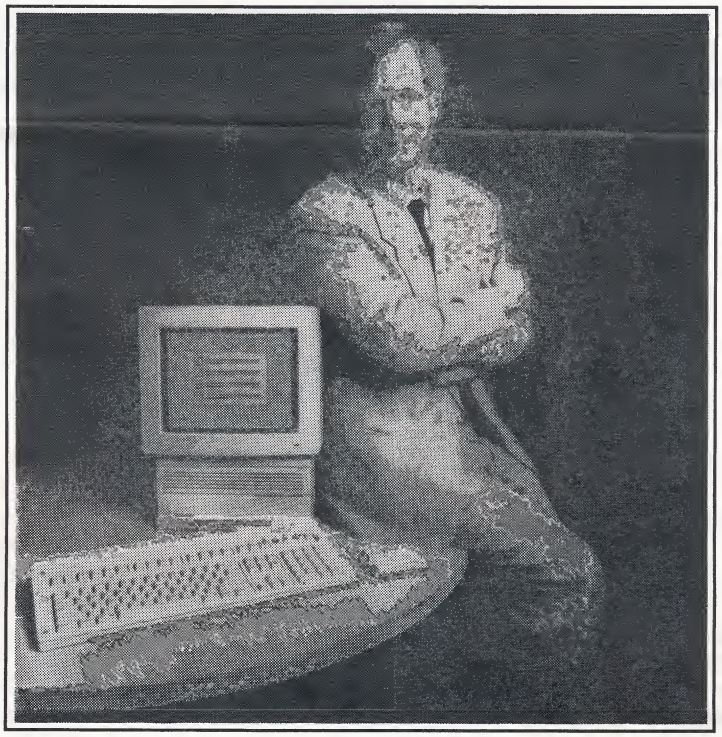
Symantec Welcomes Peter Norton!

Symantec is pleased to welcome Peter Norton to our Board of Directors and is excited to be able to offer a full line of excellent utilities products for the PC, the Mac and for Unix environments.

"Over the past three months the transition has been completed, including the integration of our international and corporate sales efforts," said Gordon E. Eubanks, Jr., President and CEO. "Also during the transition we shipped the Norton Utilities for the Macintosh and the newest version of The Norton Utilities 5.0."

While this publication was going to press, Symantec was releasing the first jointly developed product, The Norton Anti-Virus for MS/DOS which we cover in this edition of Symantec Canada.



A Little About The Man...

Peter Norton who was born in 1943 and raised in Seattle, Washington is a respected figure in the computer industry for his multi-faceted career as a programmer, businessman and best-selling author.

After creating the widely acclaimed "Norton Utilities" software program with its "Unerase" feature in 1982, Mr. Norton subsequently founded his own company to develop and market computer software. He is also the author of a dozen technical books which cumulatively have sold over one million copies and are translated into 14 languages. His first book, "Inside the IBM PC", published in 1983 is a best selling classic, and his columns in computer publications, such as PC Week and PC Magazine have been widely read.

In September 1989, Mr. Norton was sent to Saudi Arabia by the United Nations as a member of an expert panel to evaluate a study recommending the computerization of the entire Arab speaking world. The study was commissioned by UNIDO (the United Nations Industrial Development Organization) which is located in Geneva, Switzerland.

With his wife Eileen, Mr. Norton is an active art patron and philanthropist in Los Angeles. The Nortons have lent their support to several local arts institutions and organizations. As collectors, the Nortons have accumulated a private collection of approximately 250 works over the past few years, focusing on young, emerging Southern California artists. Mr. Norton strongly believes that he and his wife have a responsibility towards the community in which they live, Santa Monica.

Mr. Norton will continue to play an active role in product definition and development and will be a Symantec spokesperson for the expanding Norton Utilities line of products.

"The synergy of our two product lines was an important factor in the decision to merge our two companies," said Peter Norton. "There are two other factors that made Symantec attractive — the company's experience in successfully managing mergers and the company's strong corporate sales force. In addition, we believe that the significant commitment we have made to build an international sales group will be extremely valuable to Symantec".

Data Security With Symantec

Every time you use your computer to create or update data you make a valuable investment with your time and effort. A recent study by Creative Strategies Research International, a market research firm, shows that the average Fortune 1,000 firm is losing at least $3.5 million dollars a year in employee productivity alone due to lost data and lost access to data on microcomputers. The study suggests that 80 to 90 percent of the threats to PC data are easily eliminated by tools such as those provided by Symantec and Peter Norton who want to help you protect that investment by providing you with tools designed to prevent problems before they occur. In addition, our tools will rescue you in case of a data emergency and help you keep your computer working at its best so you can work at your best. In short, we offer maximum protection so that you can feel safe for added peace of mind.

SYMANTEC'S COLLECTION OF SOLUTIONS

MACINTOSH SE

THE NORTON UTILITIES Version 5.0

The Award-Winning Choice for the Business User.

A Norton A Day...

Symantec and Peter Norton Computing Inc. have broadened the classic software package to further meet the needs of business and professional users. The new release, built on a "fail-safe architecture" virtually guarantees protection from data loss by offering the industry's richest set of DOS based utilities for disk repair, recovery, protection and performance as well as a new graphical user interface. Version 5.0 also includes advanced network utility features.

These utilities perform like an on-line consultant, suggesting courses of action depending on the current condition of the disk. The result is that even novice users can solve what used to be extremely complex repair tasks on their own.

"We're aiming at people who rely heavily on personal computers, but are less technically inclined than our traditional customers," said Peter Norton, founder of Peter Norton Computing Inc. and board member of Symantec. "Version 5.0 will enable these users to run maintenance routines that keep systems at their peak, prolong disk life and prevent lost data. Because the technology is smarter and easier to use, it should reduce calls to heavily backlogged MIS PC support groups and significantly reduce support costs."

MIS and IC professionals can easily customize the entire environment of The Norton Utilities to restrict access to selected utilities, set parameters using a graphical interface and modify or add user messages.

New utility features recover and protect data and increase disk reliability and performance including Norton Disk Doctor II, Calibrate, File Fix, Norton Cache, File Save, Disk Monitor and Diskreet.

Norton Disk Doctor II automatically diagnoses and repairs more disk-related problems than any program of its kind. Calibrate tests and adjusts the "interleave" of a hard disk and performs a low-level format to ensure that data is read and written as quickly and accurately as possible. It can significantly lengthen the life of a disk drive, revitalizing areas that have become demagnetized and adjusting misalignments that naturally occur over time. File Fix repairs damaged Lotus 1-2-3 and dBase files by delving into the internal file structure of a spreadsheet or database to make repairs that would challenge even a skilled technician. Diskreet allows users to store sensitive information in encrypted form under password control. Unlike other security packages, Diskreet simulates a password protected disk drive that acts like a secure vault, encrypting and decrypting data in the background so that users do not have to perform extra steps.

Every utility in The Norton Utilities 5.0 has been enhanced with a mouse-driven graphics interface that makes the frequently used functions readily accessible while allowing more seasoned users to delve deeper into the program. In addition, substantial functional enhancements have been made to the existing set of utilities, including faster Speed Disk, easier UnErase, smarter File Fix, more System Information and a more powerful Disk Editor.

An introductory offer of a free copy of Norton Backup is available to buyers of Norton Utilities 5.0. Details of this limited time offer are included in the specially marked retail packages of the Norton Utilities 5.0.

THE NORTON ANTIVIRUS Version 1.0

Symantec offers DOS users Virus Detection, Protection and Eradication

Virus protection has proven to be of increasing importance to computer users in both the MS/DOS and Macintosh environments. Viruses are a problem to individual users, however, as companies move toward greater PC networking, the chances of becoming infected with a virus and losing valuable data increase. Protection software offers users

NORTON ANTIVIRUS CONTINUED...

insurance from infection and loss of data.

"The Norton Antivirus offers the same high quality protection for the MS/DOS systems as we provide the Macintosh environment with SAM, Symantec's AntiVirus for Macintosh," said Gordon E. Eubanks, Jr., President and CEO. "It contains the same design philosophy used in SAM, that prevention of infection is the best form of protection."

There are currently over 160 known viruses in the MS/DOS environment. PC viruses are, in general, more destructive than Macintosh viruses; they can erase hard drives, delete files and corrupt applications. For example, the Jerusalem B virus deletes the file it is infecting on Friday the 13th, and the Disk Killer virus reformats disks so that all data is lost.

The Norton AntiVirus offers a menu-driven interface, complete with pull-down menus that are consistent with the familiar Norton User Interface, mouse support and command-line operation. The Norton AntiVirus is also compatible with Windows 3.0.

Virus Intercept is the first line of defense against virus attacks. It is a small memory-resident modular which examines every file that is brought onto or taken off the PC to protect against infected files entering the system through a floppy disk or across a network. In addition, Virus Intercept checks every application that is launched and every file that the application attempts to load into memory. Virus Intercept will alert users to virus attacks with Windows or any graphic mode application running.

Virus Clinic is the in-depth diagnosis, report and repair tool. It automatically checks itself and the PC's memory for virus infections when it is launched. It scans all memory, drives, directories and files selected by the user for the presence of known viruses. The Norton AntiVirus also scans for file irregularities by ignoring file names and intelligently looking for file "types".

Virus Clinic will run either as a standard DOS application or as an application within Windows. The password protection in Virus Clinic prevents anyone from "tampering" with configuration options without the correct password.

"Viruses often create problems on hard drives, causing users to think they need to reformat," says Norton. "Viruses can now be detected and eradicated to eliminate the problem without unnecessarily reformatting the hard drive."

The Norton AntiVirus allows immediate protection against new viruses through either a Symantec 24-hour MS/DOS Virus Newsline or Bulletin Board Support. Customers can instantly update their software to protect against new viruses by calling a special telephone number to receive instructions on how to perform the update. The Symantec on-line bulletin board enables customers to download and then install virus definitions with a simple menu command.

Symantec is the leading vendor of data protection and system utility software products and with this addition now offers the most comprehensive DOS utility product line available.

UTILITIES FOR THE MACINTOSH COMPUTER

In June when Symantec Corporation and Peter Norton Computing Inc. completed the definitive agreement to merge PNCI into Symantec, The Norton Utilities for the Macintosh was just about ready to ship. We heard a lot of rumbling that Symantec wasn't going to release the product, it was competition for our own SUM II. But in fact, The Norton Utilities for the Macintosh and SUM II service two different types of users. Let's explore those differences!

The Norton Utilities for the Macintosh offers a set of utility programs that can repair disks and files, enhance daily system performance and productivity and simplify everyday operations for all levels of users.

The Norton Utilities for the Macintosh is fast and no technical expertise is required. With 45 different types of error checks it performs the most extensive checking and provides the user with more diagnostic information than any product on the market. When an error is detected the program gives an easily understood description of the problem and recommends making an instant fix or skipping the problem.

It's ideal for daily use with powerful Desk Accessories, Control Panel Devices and System Enhancements. And with three types of UnErase you can scan for erased files and bring them back to life. Forget the name of a file but remember the file type? UnErase can scan for over 40 specific types of files (MicroSoft Word, FileMaker, WingZ, SuperPaint and more) to maximize file recoverability. Forget the name but remember the contents? UnErase can also search for a text string to recover a file or a specific portion of a file. All in all it recovers more files than any other product of its kind.

In conclusion, The Norton Utilities for the Macintosh is an unbeatable combination of data recovery programs and exceptional disk optimization utilities that protects data and improves the quality of daily Macintosh processing to be utilized by all types of users whether they be new Macintosh owners not yet aware of the importance of utilities or high end user types.

SUM II on the other hand is a collection of specialized, powerful utility programs for ensuring that your data is safe, secure and efficiently organized. You can also protect the information on your disk from unauthorized users.

The program allows you to pick which utilities you want to install and where you want to install them. Therefore, the MIS professional can shield certain components from the end user who doesn't need or shouldn't have that type of power.

Other components such as SUM Tune-Up, SUM Partition, SUM Encrypt and Tools are there to ensure the hardware is running to its optimum performance. Of course backing up is the safest way to protect your data on your disks, and the component SUM Backup was designed and engineered by Microseeds Publishing Inc. and is based on the popular backup program Redux.

SUM II has won all the awards, The 5-Mice MacUser rating in December 1989, The 1989 MacUser Editor's Award and in August won the prestigious Macworld World Class Award.

In conclusion, utilities are not a luxury purchase item. If you're looking for data security and piece of mind then be aware that Symantec has a product to protect every Macintosh and to ensure that your hard disk is always operating at the peak of performance.

LOOKING FOR A BETTER WAY TO ORGANIZE YOUR LIFE?

What's the hottest new niche in the software industry? Programs that offer ways to improve personal productivity and time management.

Outliners offer dozens of ways to improve personal productivity in an office environment. Describing the uses of an outliner is like trying to describe the uses of a spreadsheet or word processing program; they are infinite. However, a description of some of the ways people have exploited their capabilities will start on an explanation:

- The use of outlining for research and writing is probably the most predominant.
- Personal organization and scheduling, which takes advantage of the capability of outliners to make informal lists.
- And lastly, developing presentations, which because of their typically concise nature, they follow an outline format.

What makes them so powerful as writing tools is the fact that you are capable of modularizing ideas, subordinating ideas to a broader idea, then rearranging those ideas as you see fit in the document. Once a set of ideas is clearly subordinate to a broader heading, you have the capability of hiding information to see how the broader idea fits in with the even larger context of the document. The outline's hierarchy and the expand and collapse features help organize the information and make any item easily accessible.

Some of the more common uses falling into the category of a personal organizer is the making of lists; to-do lists, phone lists, address files and logs of different types. Also the ability to schedule appointments, track critical project dates and resources assigned to particular tasks give it the qualities of a project manager.

And lastly, the area of presentations. In business and academic environments, presenters would be lost without their briefing slides. Now whether the presenter chooses to develop handouts, overheads or even slides, the information must be easily digested by the participants. An outliner offers the best way to develop a presentation because of the natural modularization of ideas.

The answer to the question, "Where do we go from here with outlining?" is therefore in many directions. Outliners will continue to evolve into better thinking, writing and presentation packages to ensure higher productivity in many areas.

THE TOP OUTLINERS ARE MADE EVEN MORE POWERFUL

Symantec Corporation recently shipped a new version of its powerful Macintosh outlining and presentations product, **MORE Version 3.0**. MORE 3.0 provides business managers with a faster way to organize and present their ideas by bringing together powerful outlining, word processing, presentation graphics and financial charting. This unique combination makes MORE 3.0 the only business communications tool available that lets users create a broad spectrum of business documents and presentations quickly and easily.

MORE 3.0 lets you create impressive presentations quickly because it instantly transforms your ideas into a bullet chart presentation, or a tree chart in just one step. You can sharpen and revise your ideas fast, while MORE outliner re-numbers and re-formats your documents as you go. MORE 3.0 also gives you a competitive edge with over 100 ready-to-use templates from business plans, action lists, full-length reports to full-colour presentations. Just type in your text and pick the format you want from the complete gallery of layouts. New users will also be successful in MORE 3.0 using the new Chart Tutor, a step-by-step tutorial that leads you through creating any type of presentation, from overhead transparencies, to 35mm colour slides.

This new version of MORE has been enhanced with powerful presentation tools that let you create your own polygons, curves and colour gradient backgrounds. And, you can add pie, column, area, line, scatter, bar and combination charts to your presentations with MORE Graph, a new financial charting application. MORE 3.0's unique live presentation technology also lets users rehearse and deliver presentations right on their Macintosh as an on-screen slide show. You can add special effects and text builds to your presentation and automatically generate audience handouts with MORE's powerful print options.

No other product gives you the power and flexibility of MORE when it comes to making professional looking presentations and documents, and nobody makes it this easy! Give the Symantec office a call and you can receive a FREE trial size of the product to test for yourself.

Symantec also has a new release of its DOS product **GRANDVIEW Version 2.0**. Symantec's commitment to provide complete business communications solutions is apparent in the new version of this computer-based planning and time management package. It provides managers with an effective way to capture, organize and use information with outlining, enhanced word processing and cross-referencing features.

GrandView 2.0 can be run as either a memory resident or standalone application using less than 20K of RAM. In memory resident mode, the user has instant accessibility to the full features of GrandView 2.0 without leaving another application.

Powerful outlining capabilities make GrandView 2.0 the ideal tool for processing information quickly. The user can enter ideas and details into GrandView, in any order, and then use the intuitive outlining features to structure the ideas. GrandView 2.0 numbers and aligns information into a flexible outline format and automatically re-numbers and realigns subheads and headings as items are moved around.

GrandView 2.0 also includes templates of the many popular business formats which the user can choose or change instantly. Custom templates can also be created and stored for future use.

A built-in calendar helps users track due dates, schedule appointments and plan faster and more accurately. Dates are assigned to headlines by choosing them from a calendar, accessible by a single keystroke. In calendar view, users can scroll through the calendar viewing all headlines assigned to each day.

In addition to dates, users can assign items such as priority or person to the headlines in an outline. Each outline

TOP OUTLINERS CONTINUED...

may have up to 20 user-defined categories. Up to three categories can be displayed in columns to the right of the outline. For example, a project outline might have columns showing the assignments for the date, person and budget categories, while a to-do list might have columns showing assignments for date, priority and status categories.

With the file-linking capability, information can be shared between GrandView files. Again, for example, a master schedule can be linked to an individual to-do list, or a status report can be linked with a project plan. File-linking allows a user to link files across a network.

And lastly, GrandView 2.0 includes connections to **Lotus Freelance Plus** and **Harvard Graphics**. Users of either product can build presentations, slide shows and organization charts from GrandView outlines. With these connections, GrandView 2.0 brings additional presentation management and content development capabilities to both products.

Whether you need to develop a business plan, coordinate an event or plan a project Symantec helps you bring your ideas to life.

SUM II, WHAT A PROMO!

For any customer who purchased a retail copy of the SUM II between August 1, 1990 and September 15, 1990 you are eligible for a free Macintosh book "Understanding Hard Disk Management on the Macintosh". This book is valued at $22.95.

In order to receive the free gift, you must send proof of purchase, the customer registration sticker (found in the customer service plan), name, address and daytime phone number to Symantec at our address of 10201 Torre Avenue, Cupertino, California U.S.A. 95014.

SPREADSHEET ENHANCEMENT NEWS

SYMANTEC ANNOUNCES SUPPORT FOR LOTUS 1-2-3 RELEASE 3.1

In a joint news conference held in Boston, Massachusetts on September 18, 1990, Lotus announced the release of the new version of the Lotus 1-2-3 spreadsheet 3.1. Symantec was there to let everyone know that as a leading developer of Lotus add-in software products we will support this release in a future version of SQZ! Plus, our file compression utility.

"Despite hard disks getting larger and less expensive, spreadsheet users still run out of disk space," said Gordon E. Eubanks, Jr., President and CEO. "SQZ! Plus will continue to offer Lotus spreadsheet users a solution to this problem."

"SQZ! Plus has been one of the leading 1-2-3 add-ins for the past four years," commented Paul McNulty, Lotus' Director of Marketing for 1-2-3 Release 3.1. "We're excited at the prospect of its availability for 1-2-3 release 3.1 and look forward to continuing our successful relationship with Symantec."

SQZ! Plus automatically and transparently compresses Lotus 1-2-3 and Symphony spreadsheet files by up to 95 per cent. This provides increased storage capacity on both hard and floppy disks and faster file transmissions and backup. SQZ! Plus includes a file recovery utility, which recovers lost or damaged files. The keystroke recorder in SQZ! Plus helps create macros quickly and easily and the autosave function automatically saves spreadsheets to disk at user-defined intervals.

SQZ! Plus also includes file history tracking and file backup from within 1-2-3. It is the only compression tool that can be loaded or unloaded from memory without exiting 1-2-3.

The current version of SQZ! Plus is compatible with Lotus release 1A, 2.0, 2.01 and 2.2 for single users and all versions of Symphony.

SYMANTEC AND METIER MANAGEMENT SYSTEMS ANNOUNCE THE TIMELINE/ ARTEMIS CONNECTION

In 1988 Symantec Corporation and Metier Management Systems, Ltd. entered into a strategic marketing and development agreement in order to provide customers with a complete project management solution. TimeLine software by Symantec is the predominant PC-based project management system, and Metier is the predominant minicomputer and mainframe-based project management system.

"Our relationship with Metier provides customers with a complete project management solution, capable of sharing data between the leading PCs, minicomputers and mainframe-based project management systems," said Gordon E. Eubanks, Jr., President and CEO for Symantec.

Connection offers broader project management capabilities to corporations by importing and exporting data between TimeLine and ARTEMIS. This data transfer capability allows customers to manage individual project schedules in TimeLine and consolidate them in ARTEMIS for corporate-wide reporting.

"With Connection, we can provide our clients an inexpensive, user friendly product for managers to transfer their data from TimeLine to ARTEMIS — without having to know the ARTEMIS programming language," said John Gibney, senior systems analyst at Jaycor, a government and industrial consulting company. "Using Connection we pass TimeLine sub-schedules to ARTEMIS and create a master schedule.

Connection is unique in that it is a fully-automated data transfer system. This system is invisible to the user and features a verification and error checking facility to ensure data integrity during the transfer process.

The TimeLine/Artemis Connection is available now and is sold by Symantec Corporation and Metier Management Systems.

SPLAsh Makes A Splash!

The SPLAsh (Symantec Programming Languages Association) party to launch the new THINK user group was an incredible success! The party was held at the Computer Museum in Boston during MacWorld. Gordon Eubanks, Jr., Symantec's CEO and President along with Julie Bingham, the THINK Product Manager welcomed over 400 THINK fans who were enjoying the delicious make-your-own sundaes. Many signed up for SPLAsh membership on the spot and a great time was had by all. Anyone interested in receiving a copy of the premier issue of the SPLAsh newsletter, "THINKin' CaP" or in membership details just drop Symantec Canada a note; we'd love to give you aspiring and dedicated programmers another great reason to buy Symantec's THINK languages.

THREE MACINTOSH VIRUSES DETECTED

Our utilities group has been kept on its toes recently by the threat of three new viruses, one relatively harmless, the other quite dangerous.

The first is Garfield, a virus discovered at Cornell University during the middle of May. Garfield attacks both applications and system files by adding its viral resource and renumbering the system menu definition in the system file.

The second virus (actually a Trojan horse INIT) is named Steroid, and claims to increase the speed of QuickDraw on Macs with 9″ screens. In reality the INIT will erase all mounted drives on the system if it detects a date setting past June 30, 1989.

And lastly, SAM protects against the newly discovered nVIR B virus clone "prod". The nVIR B strain was recently discovered in England and is a clone of common nVIR B but otherwise the two viruses are identical. Effects of the nVIR B strain are system crashes, increased application size and the inability to open applications.

In the Advanced Protection mode, SAM 2.0 will alert users to the Garfield virus. SAM 2.0 will also alert users that the Steroid INIT contains Trojan horse code.

Remember the major benefit of SAM is the ability to stop viruses before they enter your system. Putting SAM on your system ensures that you can rest easy knowing that you have a "watchdog" constantly monitoring any activity that looks suspicious. The new Virus Definition feature in SAM 2.0 will allow all users to perform a self-update to detect any new virus and prevent it from infecting their systems by calling our Virus Hotline*. With this much power and performance, you might expect SAM to be difficult to use. You'll be pleasantly surprised to learn that SAM does all the work while you enjoy all the benefits.

* The Symantec Virus Newsline is available to residents of North America at (408) 255-8744.

Software Publishing Association Pamphlet Discusses The Problem of Software Piracy

As editor of Symantec Canada I've had a lot of questions posed by both resellers and end-users on the policies of software copying. During the past few months, the Software Publishers Association has developed a brief but informative pamphlet entitled ***Copying Software.*** *Symantec now bundles the pamphlet with our documentation, in an effort to educate customers about the problem of software piracy. The text is reproduced here in its entirety.*

Q: Is it okay for my colleagues and I to copy each other's software?

A: No, I'm afraid not. Because computer software companies invest large portions of their earnings in software development, they deserve a fair return on their investment. And the creative teams who develop the software — programmers, writers, graphic artists — deserve fair compensation for their efforts. But, in turn, everyone benefits. Educational software allows you and your company to save time, effort and money.

Q: That makes sense, but what do I get out of purchasing my own software?

A: A lot! The benefits you stand to gain with purchased copies of software programs include user guides and tutorials, quick reference cards, considerable discounts on upgrades, savings on compatible hardware and software and free technical support from Symantec.

Q: What exactly does the law say about copying software?

A: The law says "it is illegal to make or distribute copies of copyrighted material without authorization," including software. Penalties are fines up to $50,000 and jail terms up to five years.

Q: So I'm never allowed to copy software for any reason?

A: Actually, you're allowed to make one backup copy of your software, if one wasn't already included in the box.

Q: Do the same rules apply to user groups? I always figured the reason they got together was to share software.

A: Many software companies offer special user-group programs, which may include the right to copy the software for archival purposes. In any case, it is the responsibility of user groups to encourage their members to observe copyright laws and software companies rely on them to do so. The same copyright responsibilities apply to schools and professional training organizations.

Q: At my company, we pass disks around all the time and don't think another thing about it. This must be okay since we all work for the company that purchased the software in the first place.

A: Well, unfortunately "softlifting" is common in some corporations. Employees make extra copies of their business software to take home, or copies are made for additional computers within the office. But corporation, too, are bound by copyright laws, just like everyone else. The rule to follow is one software package for every computer.

Q: I'll bet many of the people who copy software don't even known they're breaking the law.

A: Most people don't purposely break the law — they would never consider, for instance, stealing money out of someone's pocket. If you're part of an organization, see what you can do to initiate a policy statement that everyone respects. And as an individual, you can spread the word.

SYMANTEC.
(CANADA)

SYMANTEC PRODUCTS FOR MACINTOSH

..MORE 3.0 – More 3.0 lets you quickly organize your ideas, presentations, action lists, meeting agendas and more into impressive desktop presentations and effective business reports.

Suggested Retail $515.00

..SAM 2.0 – Symantec AntiVirus for Macintosh 2.0 is the most comprehensive software package available for combatting viruses and trojan horses designed to attack your Macintosh computer.

Suggested Retail $125.00

..THINK Pascal – Think Pascal Version 3.0 is a completely integrated Pascal development environment that's easy to use and easy to learn.

Suggested Retail $375.00

..SUM II – Symantec Utilities for Macintosh Version 2.0 is a collection of specialized data recovery and disk management utility programs designed to keep your Macintosh operating at peak performance.

Suggested Retail $195.00

..THINK C – Think C Version 4.0 is the ultimate C development environment; it takes you from idea to finished product faster than any other development environment for the Macintosh.

Suggested Retail $325.00

..NORTON UTILITIES FOR MACINTOSH – NUM is an extraordinary combination of data recovery software and productivity enhancement utilities that protect data and make everyday Macintosh use quick and easier.

Suggested Retail $159.00

Editor's Note: If you are interested in a free demo disk and more information on any of our products and you are a reseller, please call our Reseller Account Number (705) 734-0605 or, if you are an end-user or corporate client, call our Sales Office at (416) 923-1033.

Q&A, TimeLine, GrandView and SQZ! Plus are registered trademarks, and MORE, The Budget Express, THINK C, THINK Pascal, SUM II and SAM are trademarks of Symantec Corporation. SYMANTEC PRODUCTS FOR IBM PC AND COMPATIBLES

..NORTON UTILITIES 5.0 – The Norton Utilities are tools designed to prevent problems before they occur. Norton will rescue you in case of data emergency and will keep your computer working at its best so you too can work at your best.

Suggested Retail $219.00

..NORTON COMMANDER 3.0 – Organize, view and send your data electronically with the critically acclaimed DOS manager. Whatever you do with your data, if you want to do it as quickly and as easily as possible, you need the Norton Commander.

Suggested Retail $195.00

..NORTON BACKUP 1.1 – This is the fastest, most reliable backup software you can buy. It's also the easiest to use. Our unique FastPath™ technology makes the Norton Backup as much as 200% quicker than the next competitor, all without sacrificing ease of use.

Suggested Retail $195.00

..GRANDVIEW 2.0 – GrandView is an advanced outlining program designed for busy managers who need a powerful planning and personal organizational tool. And with a Dynamic Link to both Harvard Graphics and Lotus Freelance you can easily transform your outlines into persuasive presentations.

Suggested Retail $375.00

..THE BUDGET EXPRESS 1.1 – The new Budget Express is a Lotus 1-2-3 add-in designed for users working with budget plans, forecasts and other structured financial applications by providing custom functionality and timesaving short cuts. It also now has full network support.

Suggested Retail $195.00

..NORTON ANTI-VIRUS 1.0 – The new Norton Anti-Virus is the only PC software product that offers detection, protection and eradication of known MS/DOS viruses in a single package.

Suggested Retail $159.00

..Q&A WRITE – Q&A Write is a lightning fast, feature rich word processing package for professionals and executives.

Suggested Retail $249.00

..Q&A Version 3.0 – Rated the #1 File Manager and Word Processor by software evaluators throughout the industry. Combines ease of use, power and performance for all business needs.

Suggested Retail $449.00

..DESKMATE Q&A WRITE – A word processing program that was developed for Tandy's DeskMate graphical user interface with features like page preview and the ability to paste in text and graphics from other DeskMate applications.

Suggested Retail $199.00

..TIMELINE Version 4.0 – The project manager with the exceptional combination of power, ease-of-use and flexibility with a new dimension, Project Presentations.

Suggested Retail $895.00
